

Lab 7 — Service Health and Activity Log Alerts

Hands-on Azure lab covering action groups, Service Health alerts, and Activity Log alerts.

Objective

Set up email alerts in Azure Monitor, so I get notified about Azure service issues and when a resource group is deleted.

Technologies

Azure Monitor · Action Groups · Service Health · Activity Log alerts

What I built

- An **action group** (**ag-gp-ops-email**) that sends an email, and tested it — the test succeeded.
- A **Service Health alert** (**ar-gp-service-health**) for service issues and planned maintenance.
- An **Activity Log alert** (**ar-gp-activity-delete**) that fires when the resource group is deleted.

Everything was created in the resource group **rg-gp-monitoring-alerts**.

This was a hands-on lab in a Microsoft Azure training environment, following guided steps. It was not a live company setup.

1. Action Group

An action group tells Azure who to notify, and how, when an alert fires. I created **ag-gp-ops-email** (display name **OpsEmail**) and added one email notification called **ops-team-email**. Then I ran the built-in test, and it completed with **Success**.

Action group test result: Success.

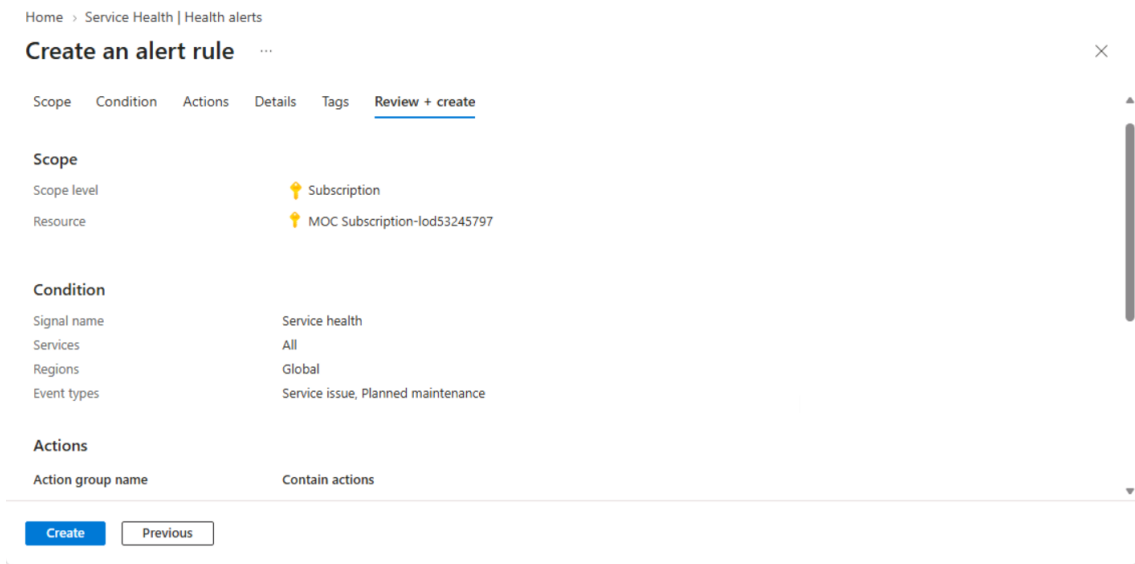

The sample alert email that arrived.

2. Service Health Alert

Service Health shows problems with Azure services that could affect my resources, such as service issues, planned maintenance and health advisories. I looked through the Service issues, Planned maintenance, Health advisories and Health history sections. Then I created the alert rule **ar-gp-service-health** for **Service issue** and **Planned maintenance** events in the **Global** region. It uses the **ag-gp-ops-email** action group and is enabled.

Service Health — Planned maintenance page (no events at the time).

Alert rule review: Service health signal, all services, Global region, Service issue + Planned maintenance.

3. Activity Log Alert

Activity Log alerts can watch Azure management operations, like creating or deleting resources. I created **ar-gp-activity-delete**, which watches the resource group **rg-gp-monitoring-alerts** for the **Delete resource group** signal. I set the severity to **Sev 2 - Warning**. The rule uses the **ag-gp-ops-email** action group and is enabled.

Alert rule review: scope **rg-gp-monitoring-alerts**, condition 'Delete Resource Group', action group **ag-gp-ops-email**.

Final Check

I reviewed both alert rules in Azure Monitor to check their conditions, action group and status. Both show as **Enabled**.

Alert rules list: **ar-gp-activity-delete** (Activity log) and **ar-gp-service-health** (Service health), both Enabled.

What I Learned

- How Azure Monitor alerts, Service Health and Activity Log alerts fit together.
- How an action group sends notifications, and how to test it.
- How to set alert conditions and choose a severity.
- How to connect an alert rule to a notification action.
